

Stay Safe & Healthy This Summer

Anyone can get monkeypox through close personal contact, regardless of sexual orientation, but many of the people affected so far are men who identify as gay or bisexual.

SYMPTOMS

- Early flu-like symptoms of monkeypox can include fever, headache, muscle aches, backache, swollen lymph nodes, chills, and exhaustion
- Rash appears within 1 to 3 days (sometimes longer) after fever, often beginning on the face then spreading to other parts of the body
- Illness usually lasts 2-4 weeks

TRANSMISSION

Monkeypox can spread through:

- Direct contact with monkeypox rash, sores or scabs
- Contact with objects, clothing, bedding, towels, or surfaces used by someone with monkeypox
- Respiratory droplets or oral fluids from a person with monkeypox or during close contact such as kissing, cuddling, or sex.

Monkeypox can spread from the time symptoms start until all sores have healed, which can take several weeks. Avoid close contact with pets or other animals until you have seen a health care provider.

Who can get vaccinated?

The vaccine for monkeypox is called JYNNEOS. With the current limited supply of JYNNEOS vaccine in New Jersey, the following residents may be eligible for vaccination:

- People who have known contact with someone who tested positive for orthopoxvirus or monkeypox virus within past 14 days
- People who attended an event where known monkeypox exposure occurred within past 14 days
- People who identify as gay, bisexual, or men who have sex with men (MSM), and/or transgender, gender non-conforming, or gender non-binary and who have a history of multiple or anonymous sex partners within past 14 days

VACCINE LOCATIONS

Appointment only - No walk ins:

- Bergen New Bridge Medical Center, Annex 2 (white tent structure), 230 East Ridgewood Ave., Paramus: www.newbridgehealth.org
- Cooper Vaccine & Testing Clinic, Cooper University Hospital, 300 Broadway, Camden: 856-968-7100 or <https://my.cooperhealth.org/mychart/authentication/login>
